

- Navigation bar at top.

- Four sections displayed vertically.
- Project cards enlarge on hover.
- Layout becomes vertical on mobile screens.
- Smooth scrolling between sections.

✅ Task 2 – Restaurant Landing Page

◆ Prompt Used

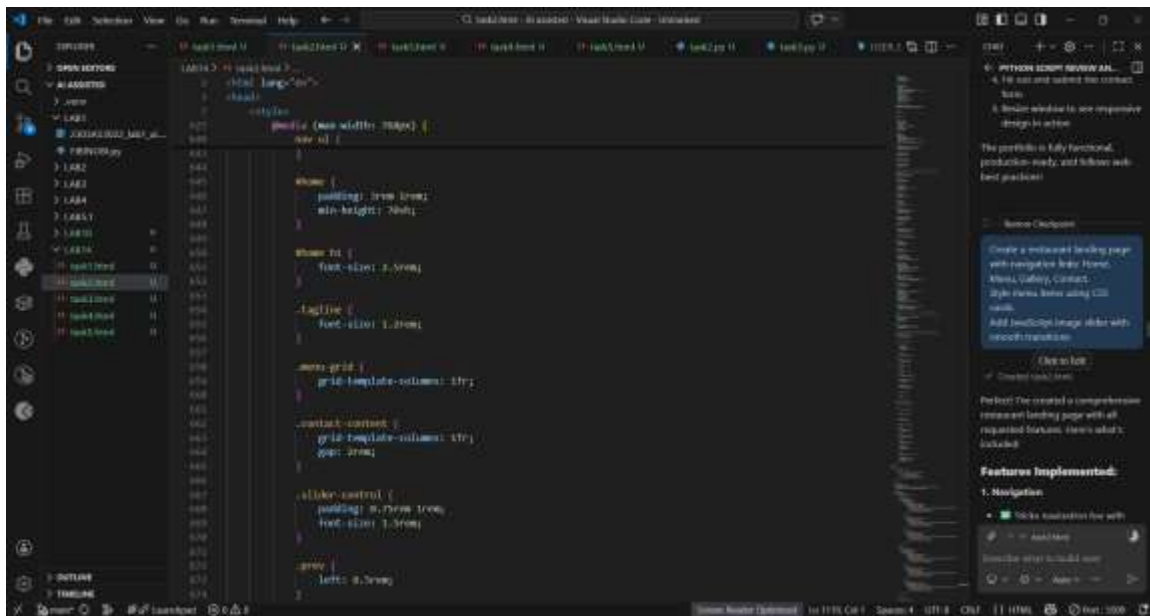

Create a restaurant landing page with navigation bar.

Add menu section using CSS Grid.

Add automatic image slider using JavaScript.

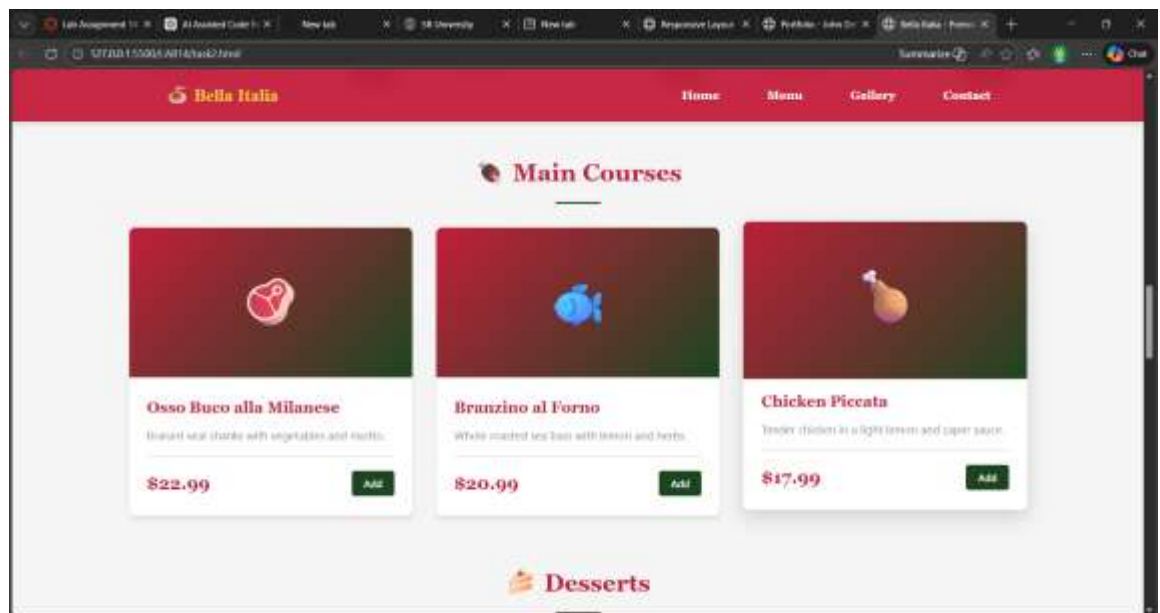

Make page responsive.

◆ **Code**

◆ Output

- Red navigation bar.
- Menu items displayed in responsive grid.
- Gallery images change automatically every 3 seconds.
- Works on mobile screens.

✓ Task 3 – Event Registration Form

◆ Prompt Used

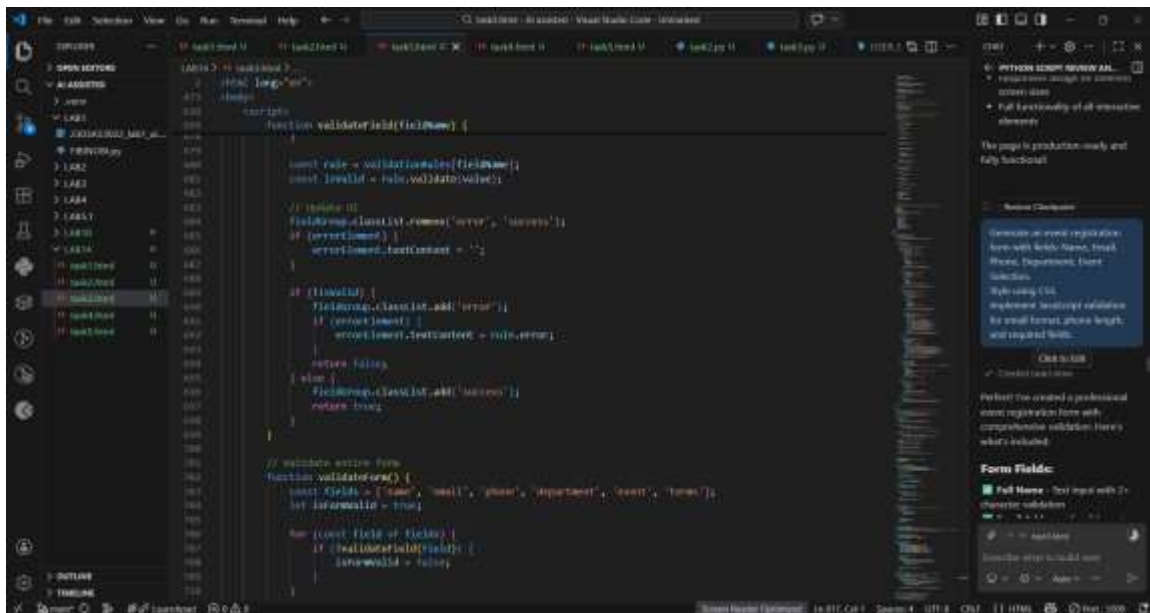

Generate an event registration form with fields:

Name, Email, Phone.

Add validation for phone (10 digits).

Style form for better readability.

◆ Code

```
from flask import Flask, request, redirect, url_for
from flask_jinja2 import Jinja
from flask_wtf import FlaskForm
from wtforms import StringField, IntegerField, SubmitField
from wtforms.validators import Length, EqualTo, Email, IfRequired

app = Flask(__name__)
app.config['SECRET_KEY'] = 'secret-key'
Jinja.add_template_filter('format_currency')

class RegistrationForm(FlaskForm):
    name = StringField('Name')
    email = StringField('Email')
    phone = IntegerField('Phone')
    password = StringField('Password')
    confirm_password = StringField('Confirm Password')
    submit = SubmitField('Register')

    def validate(self):
        if not self.name.data:
            self.name.errors.append('Name is required')
        if not self.email.data:
            self.email.errors.append('Email is required')
        if not self.phone.data:
            self.phone.errors.append('Phone is required')
        if self.phone.data and len(str(self.phone.data)) != 10:
            self.phone.errors.append('Phone must be 10 digits')
        if self.password.data and self.confirm_password.data:
            if self.password.data != self.confirm_password.data:
                self.password.errors.append('Passwords do not match')
        return super().validate()

@app.route('/', methods=['GET', 'POST'])
def index():
    form = RegistrationForm()
    if form.validate_on_submit():
        # Here you would typically save the form data to a database
        return redirect(url_for('success'))
    return render_template('index.html', form=form)

@app.route('/success', methods=['GET'])
def success():
    return render_template('success.html')
```

◆ Output

- Centered registration form.
- Required fields prevent empty submission.
- Alert appears if phone number is not 10 digits.
- Clean and readable UI.

✅ Task 4 – E-Commerce Product Page

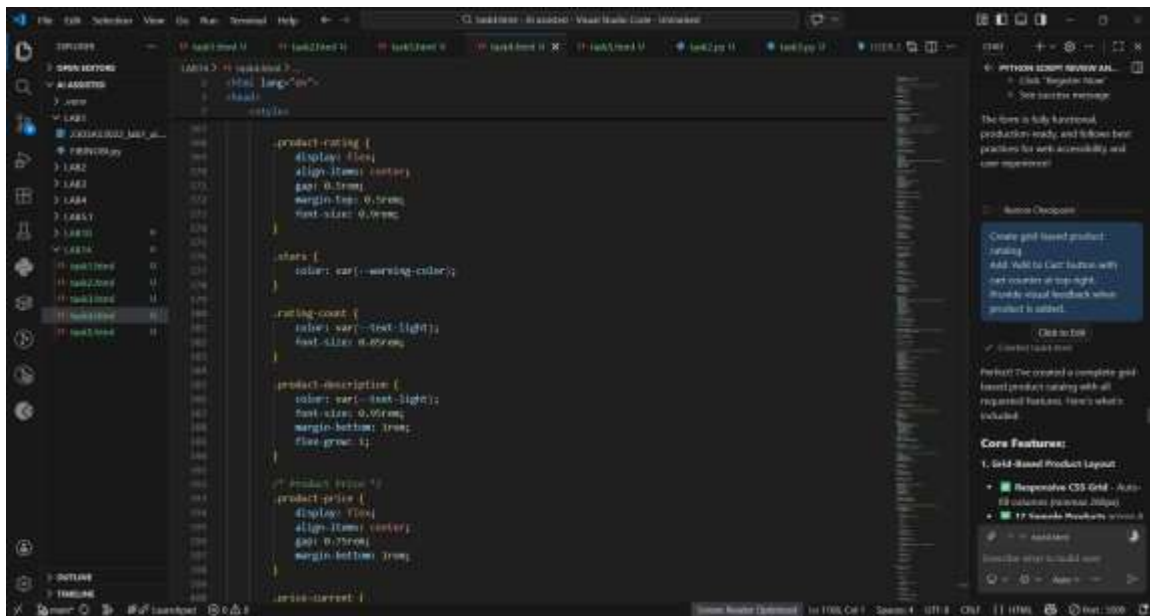

◆ Prompt Used

Create product catalog using CSS Grid.

Add Add-to-Cart button.

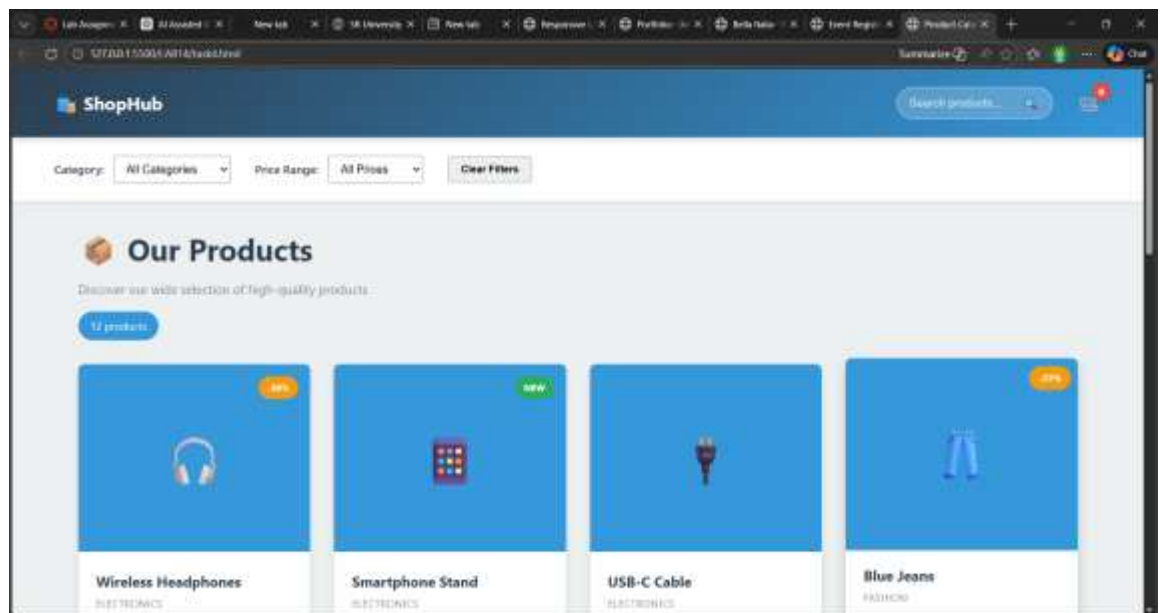

Display cart counter at top right.

◆ **Code**

◆ Output

- Product grid layout.
- Cart counter visible at top-right.
- Counter increases on button click.
- Alert confirms addition.

- Header at top.
- Main content in center.
- Footer at bottom.
- Text size adjusts for smaller screens.
